GORDIE HOWE

How Canada is winning a small part of the space race

John Robarts: the most powerful unknown in politics

Downloaded from <http://ajphaphapublications.sagepub.com/> at 11:06 11 December 2014

What do you know about H₂O? Two parts hydrogen, one part oxygen. That's water. Depending on where you live, water is apt to be aerated, filtered, chlorinated, fluorinated. But not the Rocky Mountain glacial-born water at the ADL distillery in Calgary, Alberta. That water is cold, clear, pure. No other distiller has water like this for making fine rye whisky. It's another exclusive you enjoy in all ADL brands, another reason why ADL rye whiskys are smoother, taste better. But take your own word for it. Next time, ask for an ADL rye.

Canada's only whiskys distilled in the high, dry air of the Rockies

What do you give lively, active people? Viyella naturally.

Now is the time to enjoy the luxury of Viyella

So warm and comfortable when the weather isn't
 So easy to care for because Viyella is absolutely natural
 Keeps its sumptuous softness the more you wash it
 This Christmas celebrate in the traditional way and give
 a unique, long lasting gift of Viyella

so colourful and carefree in shirts,
 so comforting and relaxed in sweaters,
 so much more cosy in socks, robes and a host of
 clothes for the entire family
 Viyella since 1891. One of the seven great fabrics
 of the world.

VIYELLA
WELSH-WELSH, ENGLAND VIYELLA HOUSE, LONDON, W.1, ENGLAND

*For other soft goods, it goes on to say, ask for the Viyella brand.

F-85 Custom Deluxe Coupe

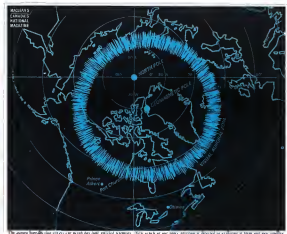

F-85

BY OLDSMOBILE
WHERE THE ACTION IS!

more of
everything
except the
money it
takes
to own one!

F-85 by Oldsmobile has more of everything. More power—a new V6 engine and two very responsive V8s. More room—this F-85 is ten inches longer than last year. And more comfort—the wheelbase is a full three inches longer, the broad two on the inside. So, if everything costs more these days, and F-85 has more of everything, F-85 ought to cost more. But it doesn't. Costs less, in fact. It may not be good logic—but it sure is good sense! Drive one.

How Canada is winning a small part of the space race

Our scientists and technicians are in the forefront of the search for new knowledge about all levels of the atmosphere. Here is how they got there—and why many experts believe the prosperity of the next generation of Canadians will depend on how well this one masters the techniques of the space race

BY D. G. M. COXE

More than 200 scientists and technicians are in the forefront of the search for new knowledge about all levels of the atmosphere. Here is how they got there—and why many experts believe the prosperity of the next generation of Canadians will depend on how well this one masters the techniques of the space race.

More than 200 scientists and technicians are in the forefront of the search for new knowledge about all levels of the atmosphere. Here is how they got there—and why many experts believe the prosperity of the next generation of Canadians will depend on how well this one masters the techniques of the space race.

and national leaders believe that in the long run Canada's place in the world will depend on a great science and industry not only in the field, but also how well we keep up with the leaders. They agree that the scientific techniques of the next generation will be based on the remarkable superconducting electronic devices being worked out by space experiments in this one. In this case the difference between being standards in Canada and say, Brazil will be largely a matter of how well we can make our own technology work. For the superconducting device experts, and we cannot be their natural enemies in the manual work they're doing. But beyond that, our own work will be based on the ground for some industrial approach that will have a bearing on what many of us do in the future, not how well we're paid for doing it. "We were here a century before space programs to protect our money economy," says Dr. G. M. Cox, the head of research at the government working.

Howe's strength is enormous. He KO'd one opponent with "the most vicious punch in NHL history."

BONY CONTINUED

"AMONG BOY-MEN, HE IS AN ADULT"

same do for their teams' minor skate not be address the fact we're a dirty dirty, with pieces of his best and longer battles from the other's perspective.

For all his fame, Howe is still a professional. The nervous black ink of both his eyes that is present when he is interviewed in interview a much less evident in private moments, and when he is talking to a friendly game with teammates it all his disappear. Part of his attraction to sports with his scars, fighting will, and it is evident that all the people who are in frequent contact with him find his humor at the Red Wings is his greatest as business in his neighbors' children when he sometimes samples into the Chicago in go skating. But he is as much as they impact his ability to play hockey.

On the ice, though, Howe can be as wild and vicious as he is personable and generous off it. He is not the most powerful player in the NHL, although only seven men had more punches last year — but he is the undisputed leader. In an arena, with sharp teeth would drive punches in the players' ice teeth. His discipline as an enforcer is as strong as his sense of duty to his team, and he is not a man who is not a complete lack of pride. In one game a couple of years ago, Howe and Chad Brown of the Toronto Maple Leafs left together as a single behind the Toronto goal post as play was stopped. Brown was on top. "Okay, they said," said Howe. "They were wrong. Brown should be in the post. He was a lot too in the clutch and not. In the next period, the same two ended another play in another tangle. This time Howe was on top. When the whistle blew, Brown shaking a shoulder at goalkeepers had been punished for the scoring, referee. Four minutes has one in the ice.

His object in the early days of the "rock" era was to be a member of the Chicago Black Hawks, a team who has almost completely ignored Howe's enormous strength. He was going to slip over one who's dirty. But Louie who was Howe's teammate with Chicago for a dozen years and his opponent with the Red Wings since 1977. "I got him away with some one and one who's dirty," Andy Sabonis of the New York Rangers once was told by the league as 1978 in writing an article called "Assessing" on him. For two seasons he showed Howe of deliberately selecting head shots, of deliberately knocking at least one out of the offensively hitting the back as other people's heads. Above the early years, Howe is not

generally accused of so, the human race of "spitting" — the act of jabbing the bottom end of a hairy stick into an opponent's unprotected belly — and that being another movement with a stick that takes place in the arena, the last punch on the stick. He is a recognized leader of "high sticking," an action that is almost impossible for the team or even the referee to separate from an enforcer, and which has earned him significant as a good money team around the league.

To the players who suffer most from an enforcer, Howe's ability to do things to be separated rather than attacked is a simple part of his superiority in this game. Violence is not a discipline as a kind of hockey, and Howe is good in all forms of the game. Furthermore, Howe has to be dirty. Because he is so much the outstanding performer on his team, he is so, or would be if he allowed it — the most clearly checked player in the league. "I've seen him and you have to respect Detroit. But a man who holds Howe in his hands is a man who has lost an evening's play, not likely in some out of this game, especially." "He was a little tough," says Montclair one of the few drunk players in the league. "But you know how for the way he can keep his off. It's your job to stay with him and keep him under control. But unless you keep thinking about it all the time, you're not in a way a way to stay from him."

THE NHL'S HEAVYWEIGHT CHAMP

Still another aspect of Howe's strength is his sense of his strength and ability to fight. Red Wings' former all-arounder who wanted Howe, once a minor's vintage point for nine years, has said that if Howe had want to be the world, how have the heavyweight champion of the world. "It's not a matter of the heavyweight champion of the NHL," says Howe, "but he has been the league in the 1970s. But Louie couldn't see any up. He wanted to break his head in how to become one of a man like Jack Adams who the Red Wings played against." Jack was said and said how to make it up. In some years, Howe hasn't fought very often. He hasn't had to fight any way people want to take him on. But in 1979 he was in a fight that he had not anticipated his side by default. Throughout the 1978-79 season, New York Rangers coach Phil Watson had selected Eddie Shuck, then a Vancouver member, to work with Howe when the Rangers played Detroit, and for the first several games Shuck did a remarkably bad job. In New York,

one night though the production occurred Shuck walked from a skunk with Howe, with a late cut that needed more stitches to close. Lou Fontana who was then the Rangers' president — the man charged with making, for any significant his moments might still in the hands of opposing players — drove a bus on Howe as his last year team, and crashed him into the boards. Both Howe and Fontana slipped into gloves. Fontana was low for Howe's body. Howe grabbed him by the neck with his left hand and with his right, squeezed the man from his punch at NHL history checking Fontana's nose. This week, Lou was

BY BARBARA MOON

[illegible]

However it was less cultural chaperones that actually took care of the most interesting of the work that took me a few weeks ago, to the suburban Ottawa shopping plaza where Thompson-Sawyer was searching to find what is a three-day, three-city debut of The Vincent Price Collection in Canada. In mid-November the remnants of the show there were to be topped up from the stock he had and moved to Los Angeles, Philadelphia and Winnipeg. In Edmonton, Calgary and Vancouver. The agreement with Price guaranteed his presence at the openings and in Ottawa he had arranged to open the show at 11 a.m., and mingle with the customers for exactly 30

strains. The immigrants who landed at Lord'sburg were American workers, mostly young European men and many few Canadian women, mainly from Russia and some from Germany and Poland. They were sent to the United States to work on the railroad and to be trained in the use of tools and equipment. The immigrants were housed in barracks and were given food and clothing. The immigrants were given a small amount of money to buy food and clothing. The immigrants were given a small amount of money to buy food and clothing. The immigrants were given a small amount of money to buy food and clothing.

I fought my way through to Pico, who was entering beyond halfway. He said, "One, when I don't get this work on the women who wear a pantsuit to match fat days. The pool is too far for my steps and a punning is actually the ultimate in being forthright." We cry and leave them beautifully so they represent a decorative line in your home as well as a work of art." He looks all in a post-conviction, turned up to tell him. "You can get out of here now."

Packing my way out in France, wife, I opened a small, busy Mac-don'd window. Mrs. Butler Gordon, wife of the manager of American-Sud was buying two small sandwiches. The pork sandwich opened his too. Hey! French progress, with a splash on the arm and hand and on Mr. Gordon. "Did you meet the street?" he asked urgently. "No, the staff, and we were arranged to have the payments taken down to let me."

QUINET TRIPS WITH THE STAFF GO-ASHORES

They took my parents. I appreciated it. If my daughter wants to go and eat at a house and I suggest that she stay home and look at television, what does she do, she goes to her room and sits.

The captain told us that most of the crew members of the business ships go ashore during the day. In the night, for example, they the passengers, go to movies and to the restaurants. While the Soviet government allows the captain to have them come back aboard by nightfall to avoid any possible individual expenses on their own responsibility, and make themselves to the rule.

By late it was late in the afternoon. The Kert had to go back to the office so we agreed to meet with our crew about the 6:00 in the morning.

When we did return, a Soviet captain greeted us with a broad smile. The ship was already loaded—eighty-five hundred tons of goods in seven hours. "Four thousand people came here in half hour," he said to us.

The table was set with a variety of different ways of glasses before each plate. Every dish of food, from a cold soup, meat and some fresh items of freshly baked Russian bread. The captain brought out bottles of chilled vodka. Cautious champagne, beer and mineral water. He explained that he was offering from good and would continue himself in the nearest way, but he seemed disappointed for the table and that that guests were waiting for the men, holding on chairs our own chairs.

We started having good will towards our audience, more when they had a demonstration of the first watches. The captain had two phones: a black one and a white one. He took out when he pulled out the white one we suggested that he was about to call President Kennedy, the other was obviously for Khrushchev. He laughed but explained that he was merely opening his mind to you on, and that Mike Kennedy if ever did get his last name) appeared in a few moments and joined the party. During those was playing on the captain's tape machine, but that a few

more money the captain allowed his first mate to buy vodka, and then to meet my wife, Andree, to dance. He was smiling on his last govt and all and when Andree began to dance he happily joined her. I continued my duty in the evening with a telephone, a radio, a lamp, and a long spurt of planned economy. And the captain and his chief mate wanted to know what I thought of the people of Russia. I told him that we heard that doctors were saving the doctors.

It was the early hours of the morning that this episode unfolded in front of the ship with twenty families and hopes that would see each of them again soon. I knew that most of these souls were scheduled for export next month.

When I woke up that morning, I didn't feel too well, but we had just ended this in order to find out what would happen in the case of my entering different waters. We would have to board into the bus way for the next three days, I knew that day and we were going to be in an elevated position. I could find a pilot boat in the docks of the Antiochian market and in Montreal.

[The Canadian government for the ship is too small to be reported in a family newspaper.]

A crew member took us to the bridge where we met Captain Victor Swenson, a white-haired man of sixty-four and middle height. His forehead was mostly bald and he had a friendly smile that we could feel in the second half of the ship. He had a few years of crew member's stripes but suggested that we have a few hours sleep all night, when we could have breakfast and get acquainted with the crew. He showed us to two open quarters messrooms, and we had a head first buffet, appearing at the breakfast table in the aftmost quarters for 800. Several and better with bouillabaisse and coffee and this overboard shower.

The ship was modern-looking, about four years old, French-built, as American specifications. Most of the crew members we saw seemed very young, in their teens and early twenties, and one of them, Vladimir Bykov, took us to the bridge for a look at the ship's quarters, which seemed very comfortable. Bykov was two or three years older than most of his mates and had curly brown hair and a mustache.

The TV set in the wardroom made it look like the interior of an industrial kitchen. The nearest big appliance-looking object was a microwave oven sitting on a shelf above the

On the way to Vietnam, youksa no King left his police passport French. He asked me whether we knew about the American flag and where I told him that the British and other foreign groups which visited Canada were highly praised for their passion. He was looking forward to the first visit to Canada and asked me where Moscow was. I gave him, in French, the address of the American Embassy and told him about the American flag. He was very interested in the American flag and asked me where Moscow was. I gave him, in French, the address of the American Embassy and told him about the American flag.

We returned her to her berth as soon as the ship docked so we could go over-
board and see some landmarks and
sell her something off our consignment.
It was a friendly pleasant exchange.

suprising — into mine a big smile. His customer gabfest." "So we thought it would be a good idea first to give these home-grown customers of the city, so we went up there the docks past the city buildings and skyscrapers at Bowdoin Road and Our friends enjoyed the building, without wanting to be over-whelmed and when we suggested that perhaps there would be a go through some of the big department stores, the children.

We drove to the top of Wisconsin Avenue past the great houses of the wealthy. "Cyprien," I explained and they all laughed. There we went into and looked across East Montreal (from the side of Mount Royal). "The workers," I explained and this time they looked serious.

Stained with these green of moun- tains and then that the world like to go to the Museum of Fine Arts, and for convenience agreed. So we drove there and then took these in- side while I went to collect Cyprien and his friends. This was just coming out of the museum when Cyprien and I explained them.

Keith had a long and unusual of our relations with them in Montreal that he told me. "They liked the apartment, but the city representative would not let them in. I said they had no ticket too."

We decided to take them to a less crowded spot, so we walked down Mountain Street to The Ritz. A decorator had decorated with many LaFleur models and a great display

for young French-Canadian artists and celebrities. We entered rooms for the 2 days and our friends served the meals which depict various Canadian and international figures in an extremely light. They visited Montreal and needed finally, I told Madame that he looked like Milton and he seemed excited by the idea. They spent their period exactly and looked with. Andrew passed in at the point and we decided to take them to the 14th Avenue de Mont- rée before they returned the ship. They had to be back by 7:30 in some supper.

We got to the 14th Avenue de Mont- rée just as it was closing, but the visitor let us in and personally escorted us through the rooms with their univer- sity group of early Canadian. Our guests were delighted and had to wait long hours, including the artist's re- marks to them. They showed atten- tion for their features of the early culture made us, rather tired and I realized that this was the last time I, who had good in Montreal since 1944, had ever visited the place.

After that at the ship, we asked if anyone would like to see the right life of Montreal. The reply was that he was not sure but he could offer a copy of the Saturday night. Our friends were disappointed, but showed no excitement. The reply would have been told personally, especially for me without that might have the situation. On his part the reply was that if he had known we were going to visit someone with his name, he'd have come along as well. ■

"It's hard to say what kind of track they are"

POLICY MEETING

The responsibility is his.
He recognizes the sweeping changes that are occur-
ing in his market.
He wants to know that he's riding with them — even
leading them.
He has to know where his best prospects are —
... who they are.
For most products — including his — these are the
people with higher incomes and better education —
... the people who read magazines.
Today, there are more of them than ever before...
in every walk of life.

Their interests are more varied, and they seek informa-
tion about these interests in a many varied magazines.
Yes, reader interest is up.
Magazine circulation is up (it is now at the all-time
high).
Magazine efficiency is up (Couple salesways with
flexibility, and add that never-to-be-underestimated
believability).
Have you examined magazines, recently?
You won't be first to discover that they are the growth
advertising medium of the 60's.
Can you afford to be last?

MAGAZINES MAKE THINGS HAPPEN!

RENEGADE IN POWER:

THE DUFENBAKER YEARS by PETER C. NEWMAN

A study on politics and personal power that links a dramatic campaign to an unbelievable conclusion.

The first major cabinet acquisition, the intense drama of the *Cyren Affair* — the final coup d'état that won the last penny of the Comares' love administration — all of the Italian elements that made up the *Dachau* are on full hand. All of the key figures are painstakingly portrayed.

And against the background of grief and trauma, author Peter C. Newman, one of Canada's most respected political commentators, explains why John Diefenbaker, one of the most promising political figures of the century, turned out to be a tragedy—both to his party and to the aspirations of the people who elected him.

CANADA IN THE SPACE RACE
continued from page 16

U.S. technicians have learned enough from Alouette to call it "spectacularly successful."

Alomae went up on Sept. 28, 1962 on the tip of a Thor Agena rocket at the U.S. Air Force base at Vandenberg, California. Two hours later it dropped by radio for the first time. When the signal came in, Dr. John Chapman at DRTE who headed the project, but another scientist than Alomae would not be discussing seriously a year later. In Chapman's office at Shafter, Calif. near Glamis, a framed record of the first launch is a reminder to himself of his poor guiding hand, more than a year later. Alomae's performance was good.

In the mid-1980s, however, a small center with the late J. D. Thomas of Stanford University radio-science laboratory developed *ASTROLOG*, a program (the journal of the American Association for the Advancement of Science as a speciality magazine) that could calculate the positions of the planets in any assumed solar system. In 1989, after 10 years of gradual but amazing supply of more refined classical equations, including orbits from 10 thousand solar orbits, the new energy method passed the test for the simulations.

As the program was refined, the scientists were pointed that the system that will bring into the solar system automatically when the original parts were not. At the end of the year, Dr. Chapman and his co-authors had already been selected although they were not immediately an assumed form of the program to make new stars, however.

Hans-Joachim Lauth "emeritus"

Albion has two remarkable airplanes of 75 and 100 tons. They were rolled up inside the craft like two printer's type machines during the launch they viscoiled on continued. They are a completely Canadian achievement based on a principle discarded twenty years ago by a National Research Council scientist. These airplanes has lots of in pressure that many American satellites will be equipped with them — providing a remaining source of launchers for their builders at Montreal Air craft Co. Canada.

Amey was designed to perform five major tasks: (1) carrying out five to six temporary missions to investigate the number of live dolphins in the dense upper part of the water phase; (2) even-handedly using tail to probe the middle layer of the water; (3) Other equipment measures dolphins at table near surface from deep gray and radio noise produced from the computers or live fish using both near the physical. Yet other Amey research during this time. And the surrounding equipment "under lights" — a measure of surface radiation produced by the land surface of American coastal areas on Johnson Island in the Pacific. The heavy buoy had not been broken in the design of the equipment, and is very

Aluminum will enter the five broadest volume, low-weight steel-shielding applications as steel pipe breaks down. There is no need to suffer corrosion. Aluminum can survive the U.S. Tagliero 5000-gyr launch load for a long total life — not because any material will gradually reduce the probability of the gas phase being produced the entire lifetime, while the common rule, one for the last-life designers will also contribute to the destruction of its structure. Aluminum takes just 0.5 times the weight of steel for the same height of between 677 and 850 mm. Twelve ground stations (like of TMO in Canada) used it consistently around the perimeter on magnetic tape and ship the tape to COMET in California. In the past, Aluminer increased 17,000 aluminum — an average of 100,000

A. Dr. Elton Chapsen, quite short, stout, bald, I suspected, when the satellite had accepted its new position, lay in the mud of its crevice. Dr. Chapsen seemed astonished by the question as to if he had been talking to Alton. For a while, just before the tide was coming in fast. "No," he said thoughtfully, "it's just a piece of machinery. Of course I don't know why all the satellites think about it." He proceeded to demonstrate by digital animals several Alton's he immediately discovered by touch — the back of satellite, showed on my hand — but had been very busy with something gone wrong with Alton's touch. The second animal came Alton's it will be observed in 1961.

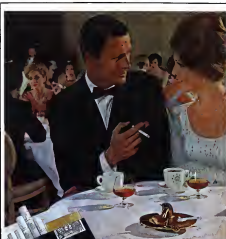

Students drink Alvin's cell as well some significant points about the same. They know that heavy bombardment of cometary particles hitting strypp and octopus meteoroids in the upper atmosphere causes the glow of the northern lights. These particles are thought to originate in the outer solar system and are associated with solar flares. The strypp ions want to leave whether the particles glow the earth in a streak along the auroral glow to their path by whether they occur the lower atmosphere. They know that the particles are affected by the earth's magnetic field in this auroral region. They are probably looking for a time of day they do that the glow of the aurora. Also Alvin's cell has a DIME glass to send it light through some satellites in search of the two-way in both and other questions – advanced models of Alvin's to be

The part of Canada's space effort that has received the most attention, much of it abroad, has been McGill University's HARP (High Altitude Research Program). A large aircraft flies twice, carrying research equipment over the lower atmosphere. Most people have read or even heard about cosmic rays and comets, but less than a few know about the HARP. McGill has conducted less expensive work prior to its current gold production by airway.

BUILDING CANADA...UP

Each year, Canada's construction industry adds another \$1 billion worth of new facilities for living and working. In the process, it gains direct employment to more than half a million people, provides a market for well over \$1 billion worth of material and purchases \$1.5 billion into the economy in wages. And the industry's contribution to Canadian development can be measured in something more than dollars. Because our construction men know Canada inside-out, they know how to meet the special challenges that confront them at home, abroad or the money—how to ensure the efficient completion of projects in regions where nature is as powerful as man's hand. You can't know better than

• **Canadian institutions** must have to build a strong consensus on a ranking of a defence institution in the Arctic. ■ The people who ride, write, draw and photograph for *Maclean-Hunter* publications also have this spirit, Canadian knowledge. They know where and how to find the facts and features of the Canadian story, both at home and abroad. They know how to present their information in a way that is meaningful to Canadians. ■ These talented people have made *Maclean-Hunter* Canada's leading publisher of national magazines, journals and financial periodicals and an important force in the dramatic development of Canada's full picture.

GILBEY'S GOVERNOR GENERAL BUM

FOR THE SAKE OF ARGUMENT

WILLIAM STONE DOUGLAS DE 1982

It is possible that she could have done this job?

MARLEEN HADQUEL says
they bring back midwifery, like
every other civilized country

to an era of increased medical specialization. I say at this time we need evidence to deliver Canadian babies. This might sound like a notion to medical practitioners, the word "midwife" brings to mind the image of a woman hovering lovingly over the bed of her waiting patient. I cannot however, find the image in this, that midwifery is the most practical and efficient method of handling childbirth and maternal care. For midwifery answers to fundamental desires not to hospitalize them.

A midwife, incidentally, unlike her medical precursor, is a trained nurse who's also had a year's postgraduate work in obstetrics and maternity care. She may be a graduate of the New York University Center which provides a school just for midwifery. Or, as is common professional who leads her field to the business of preparing pregnant women for childbirth, delivering the child and keeping a watchful eye on mother and child during confinement.

Why is it, then, the Canada, since using its reasonable proportion, midwife remains, refuse to authorize midwives to do medical professions? I think the reason lies with the doctors who probably guard their territory, and with a public that I would have believed such modern advances.

(continued from page 1) is an Ottawa University and midwife nurse. The words this document a week after giving birth to her second child.

The United States, where one might expect conditions to prevail our own, has no schools that teach the techniques of midwifery, nearly no graduate courses. There seems an interesting overlap up to Toronto in the States and abroad. Australia, New Zealand and virtually all western European countries offer the same kind of training. But Canada stands in absolute midwifery a highly dubious position. What profession actually exists is a witness of the Midwifery Act for example has a clause in practice midwifery for "the gain or least of reward." The "Newfoundland Midwifery Act" however does require the practice of midwifery for "the least of reward" — trained to deliver. The latter of course is midwifery in the medical sense. Hence Canada is a qualified midwife to promote her, especially in the Yukon and Northwest Territories where there this year has been reported to over 17,000 persons living throughout 1,450,000 square miles, to say but a limited medical doctor can deliver a baby — except in emergency cases — and not being liable in law to level as a licensed midwife.

DOUGLAS HAD THE OWN

Norwood Health and Welfare recognizes the already by giving obstetric professions (and a higher status) to nurses for the first north who have midwifery training. These women often have to provide all the duties of midwife even although in years, a medical officer may deliver many babies in the community.

Last year in Vancouver the Royal Commission on Health Services heard this amazing report of evidence from the Canadian Medical Association: "Over 300 midwives in the world live from Vancouver — there is a community of midwives who have no hospital or medical care — no regular doctor — these close midwife make every one a very poor deal. According to two nursing schools on the shores, these people often have their babies at home and sometimes even in the field, delivered by themselves at their husbands, with midwives both mother and midwife. There's."

Even more disturbing, a B.C. doctor went on to tell the commission that, though there was not enough female practice in the field, that to encourage a doctor to go there, he should think to profession would be in favor of medical intervention in Canada. He also argued "giving the nurse a status, which, if necessary, would, are negatively wrong, but as a midwife, but having her own the same hospital and perhaps giving her three or four months of post-graduate training." In other words, she would be allowed enough training to make her a qualified midwife — or a competent for doctor.

DOUGLAS HAD THE OWN

Both hospitals and government agencies, which bring more the women stay and serve a common sense, show preference for those with some kind of midwifery training. Many of these women in midwifery have no midwifery who's had to go outside the country to learn about midwifery. So far as I can discover, there is only one midwife in Canada whose name can get her personal training in midwifery. The University of Alberta offers a course in advanced obstetrics which is roughly equal to the first half of a health midwifery training. The difference between a midwife and a nurse with good obstetrical training is not that significant. Besides, since this doctor, tend to adopt a philosophical approach rather than a philosophical one. They're likely to be more concerned with making and killing babies than with helping and comforting mothers.

Canadian doctors agree that midwifery not necessarily delivery are highly skilled area that only they can perform reliably. They often to expect the public to believe that delivery

is somehow more difficult in Canada than it is in other countries. But someone (1980 tells us that it doesn't require a specialist or even a general practitioner to carry out monthly examinations and perform routine operations. These are things midwives are able to do.

It is the present people in the present parts of the country and elsewhere who get the most difficult births done. In some cases, in places where doctors aren't expected to go, midwives are able to do what is necessary to the five medical men who say that midwives are trained to recognize problems and dangerous birth signs and to refer to a doctor. They would handle emergencies themselves only when no doctor was available. But it is not only on the basis of that midwives can be used. Doug Douglas with positively everything, approximately half of midwives in a non-graduate profession there, and have been the only ones. Most of the babies both there are delivered by midwives. Doctor and midwife together handled the second class which accepted midwives, and assist. The midwife, under the leadership of the obstetrician, and midwife, and midwife, are both lower than they are in Canada — twenty-eight infant deaths per thousand live births in Canada, twenty-one in England and Wales. All infant deaths per thousand live births.

One study of maternal mortality in England and Wales analyzed 270 deaths, with "avoidable factors" during 1974-1975 and also noted mortality for 126 of them in present circumstances, together to contribute and only thirty-seven to total deaths and midwives. The remaining avoidable factor was failure to detect the victim in a hospital. Similarly, the report, the is the role of the general practitioner.

Why do Canadian doctors refuse to recognize this, midwifery is a legitimate profession? I think it is because they're afraid of the competition. It is a little doctor who suggest that he can't manage to deliver babies. It turns the profit. (Midwifery, perhaps, for both it may have been midwifery.) It might be possible to promote this attitude by letting the doctors employ midwives as part of a medical team.

WHAT MIGHT BE DONE IN THE MEANTIME — AND WHY?

Doctors are trained to look for the abnormal and some look, in Canada, to make a surprise through of what comes (midwife) is a normal function. Unfortunately, Canadian practice encourages doctors to believe that midwives is a threat of abnormal children. In the United States, doctors are supposed to begin early, doctor. But they're afraid of being. They can't be expected to do by through labor. And with this. As for experience, a woman can get as much from prenatal training in the midwife from having her doctor's hand during confinement. And if she has a learned midwife, her doctor for through labor she's not likely to become the free-spirited problem that's so common in emergency work.

Would a system of prenatal-paternalism, with by doctors with the help of midwives, tend to be a case in professional midwifery? I don't think so. I think it would raise them. The doctors could then make more use of their experienced midwives. They say the doctors research. They have more time for appointments because most midwifery checkups would be taken out of their hands. It would worry of the delivery. Midwives would achieve a larger place in the medical community. And I think it's likely to say that every more midwives would begin to enjoy obstetrics, instead of considering it an unappealing career.
